Unit type tables for "War of the Dark God"

Basic game version

Morten Larsen

October 2004

1   Unit type tables

These tables document all the common unit types of "War of the Dark God". They serve two purposes:

1. The tables give a better overview of the capabilities of all the common military units than the same data presented as one blurb per unit type. Thus these tables replace a lot of almost identical blurbs for the common mass units and you will not receive such blurbs with your turn report. (You *will* receive blurbs for all the character and leader unit types available to you as these individuals have more powers than can be summarised here, but their basic data is listed in the tables for easy comparison with your mass units and the leaders and characters of other nations.)

2. The basic data for most of the unit types presented here will be known to veterans of "War of the Dark God". Thus these tables level the playing field a bit by making the basic unit type data available to all at the outset.

The unit data are split into three categories: *Basic data* (tables 1–2) such as unit cost, number of individuals in a standard unit *et cetera* are given only for mass units which the various nations can recruit or aquire by other means. *Combat data* (tables 3–6) are given for all units likely to be encountered in the game. And *terrain data* (tables 7–11) are also given for all units likely to be encountered (because terrain affects combat performance). Within each category the unit types have been divided into four groups with a table for each group in order to keep each table small enough to fit on a page (the terrain tables are so large however that each table needs a double page). The four groups of unit types are *military units*, *special mass units*, *leaders and characters*, and *common units in quest-land*.

1.1   Basic data

Basic data for mass units are given in tables 1 and 2. They columns of these tables have the following meaning:

 # Name: The number and name of the unit type.

Class: The basic class (human, elven, dwarven, monster, *et cetera*).

Std. Min. Max.: The standard, minimum and maximum number of individuals in a unit of this type.

Cost: The resource cost for a standard size unit (i.e. a unit of the standard number of individuals).

Upkeep: The upkeep per turn for a standard size unit.

Sz.: The size of an individual of the unit type (how much space a single individual takes up).

Wt.: The weight of an individual.

Carry.: The maximum weight an individual can carry. This is prefixed with an **S** if the unit type is "strong" and therefore not slowed down by carried weight.

Spec.: Special attributes of the unit type. These are given as a letter for each attribute the unit type possesses:

F: The unit type is immune to *Fear*.

B: The unit type cannot be *Bribed*.

C: The unit type is immune to magical *Charming*.

I: The unit type is immune to *Illusions*.

M: The unit type is *Mindless.*

S: The unit type is *Stupid.*

*: An asterisk means the unit type does not influence control, i.e. it has no effective presence.

1.2 Combat data

Combat data are given in tables 3–6. The columns in these tables have the following meanings:

 # Name: The number and name of the unit type.

Sz.: The size of an individual. This is the same size given in the basic data tables but it is repeated here as it determines how many opponents (or actually: how large opponents) can gang up on one individual (see the section "Restrictions on combat" in the rule book).

W.p. Lt. Hvy. Inc.: The maximum number of wound points an individual has at full strength, when lightly wounded, when heavily wounded and when incapacitated. If no number is given under "Inc." it means the unit type cannot be incapacitated, similarly if light wounds or heavy wounds are missing it means that the unit type has no light or heavy wounds damage level.

Reg.: How fast an individual of the unit type regenerates, given as wound points per number of phases (e.g. 1/16 means one wound point every 16 phases).

Total. –Mis. –Area –M&A: Overall combat ratings *per individual* in various situations.
The "**Total**" column is the combat rating assuming missile and area attacks can be used and that the unit gets one missile attack at each range out to its maximum before it is engaged in melee. It is given as a rating where human Medium Infantry is rated at 10 and higher values are better. Note that the greater the difference in value between different units, the more uncertain is it that it reflects the actual relative strengths in combat between them (i.e. it may not take 1480 Light Infantry to match 100 Heavy Cavalry, but it is not far off that 200 Light Infantry are about as strong as 100 Medium Infantry). Note also that some units may be very good against a special kind of opponent and not so effective against others while the values in the tables are based on average performance.
The "**–Mis.**" column is the overall combat rating if missile attacks cannot be used. It is only listed for unit types with missile attacks (as it is identical to the total rating for other unit types).
The "**–Area**" column is the overall combat rating if area attacks cannot be used effectively (i.e. versus large opponents or versus individuals). Note that the value in the "total" column for units with area attacks is more or less assuming opponents of human stature (size 4) so for smaller opponents the value should be adjusted upwards while for larger opponents it should be adjusted downwards.
The "**–M&A**" column is the overall combat rating if neither missile nor area attacks can be used.

Rng.: The maximum range of the missile attack of the unit type (if any).

Area.: The area affected by the largest area attack available to the unit type (if any). The areas are given in the same units as the unit type sizes in the "**Sz.**" column, so e.g. an area 16 attack will in general affect 4 human-sides opponents.

Walls: If the unit type has non-standard combat performance when fighting across walls, its performance in % will be listed here.

Spec.: Special combat abilities of the unit type, given as a letter for each ability:

B: The unit type is *Brave.*

W: The unit type is *coWardly.*

F: The unit type can fight in *Formation.*

C: The unit type can *Charge.*

R: The unit can *Receive* (and negate) a charge.

V.p.: The number of victory points you gain for eliminating one individual of this unit type.

Table 2: Basic data for special mass units (monsters *et cetera*).

1.3   Terrain and awareness/visibility/hiding data

The performance of the different unit types in various terrains is listed in tables 7–10, with supplementary data given in table 11 for the very few unit types which can move and/or fight in non-standard terrains (these unit types are marked with an asterisk after the name in the main tables).

Each of the tables 7 to 10 is split across two facing pages but aligned so that it can be read as one table. The unit type numbers and names are listed at both ends of the long table lines and all the other columns correspond to terrains.

Each entry in the terrain columns is made up of three items separated by slashes: *move cost* / *familiarity* / *combat efficiency*.

The *move cost* is the number of phases required to move one hex in the terrain. For location terrains like e.g. "city" it is only relevant for computing control times and determining initiative. If the move cost is listed with a "+" it is a *crossing cost*, a cost should be added to the normal move cost e.g. for crossing a river. A dash means the unit cannot move in this terrain or cross this feature.

The *familiarity* is either **u** for "unfamiliar", **s** for "standard" or **f** for "familiar".

The *combat efficiency* is the efficiency in percent for the unit type when fighting in this terrain, a dash meaning the unit type cannot fight there. It is possible to have a combat efficiency for terrains which there is no move cost and/or familiarity for. This means that the unit type can fight in this terrain even though it cannot normally enter it. Specifically if a unit type has a combat efficiency for "air" listed in table 11 it means that units of that type can fly during combat (and hence attack over castle walls with little penalty) but cannot fly for extended periods of time and therefore cannot move to an "over" position like true flying units can.

In addition to the columns corresponding to terrains there are three columns with ratings for unit *awareness*, *visibility* and *hiding*:

Aw. This is the *awareness rating* of the unit type. The higher this number, the better the unit is at spotting things around it (such as units and locations in neighbouring hexes). The standard awareness rating is 100.

Vis. This is the *visibility rating* of the unit type. The higher this number, the easier it is for other units to spot a unit of this type. For mass units the visibility rating is given for a unit of standard size; units with a number of individuals different from the standard have their visibility rating adjusted by multiplying it with a factor $(3/4+n/4)$ where n is the "size" of the unit in standard units (so for example a unit four times larger than a standard unit has its visibility rating multiplied by 7/4, corresponding to an increase of 75% over a standard unit).

Hide This is the *hiding rating* of the unit type, the higher the better. When a unit is hiding, its visibility rating is decreased making it harder to spot for other units. The exact reduction in visibility rating depends on terrain (it is easier to hide in woods than on the plains) and the familiarity of the unit with the terrain, and on the hiding rating. All else being equal, a unit of hiding rating 100 when hiding becomes twice as hard to spot as when not hiding while a unit of rating 0 does not become harder to spot and a unit of rating 200 becomes three times as hard to spot when hiding.

Table 5: Combat data for common units in quest-land.

2 Table of unit types capable of control

Frequently in War of the Dark God it is of importance to calculate how long an enemy control order will take, e.g. when an enemy force is about to start control of a power spot hex and you need to determine whether you can get there in time to interrupt control. How control times can be calculated is detailed in the rule book in the section entitled "How to compute the exact time required for a control". The information needed is the composition of the enemy force and the exact control capabilities of the enemy force leader. A table of the control capabilities of the various leader types is made available here to give veterans and new players alike the chance to compute control times (table 12).

The columns in table 12 have the following meanings:

 # Name: The number and name of the leader unit type.

Bs.: Base time multiplier.

Sh.: Shared time multiplier.

Valid helpers: The unit types which count as helpers (mnemonic names, sorted by unit type number).

Notes: Letters marking special control capabilities or restrictions:

A: The leader can control *Alone*, without a helping force.

N: The leader can only control hexes *Neighbouring* already controlled hexes or containing locations already controlled.

H: The leader can only control *Hexes*, not locations.

U: The leader can only control previously *Unowned* hexes and locations, i.e. the leader cannot neutralise enemy control.

Table 12: Control capabilities of leader unit types.

3   Information on strikes, shielding and warding

A key strategic element of the game are the *strike spells*, such as *firestrike* and *lightning*. Equally important is the ability to *shield* units against strike spells and to *ward* locations against strikes. The tables 13, 14 and 15 summarize the strike, shielding and warding capabilities of the different unit types. In the three tables are the following columns:

 # Name: The number and name of the unit type.

The units King of Pyr (3601) and Queen of Wey (3801) have special magic not common to their type of unit and are therefore listed specially. The King of Pyr has his *nightmares* and the Queen of Wey has her *coldstrike* only when there are 5 or more dark obelisks.

The human Priests have ward spells depending on their religion. Each entry for a Priest's ward spells are marked with the nation code of the nation the Priest belongs to.

Power: Maximum strike power.

Range: Maximum range to target of spell, in hexes.

Time: Time required to cast spell.

Base cost: Fixed basic cost of the spell.

Range cost: Cost per hex of distance to target.

Power cost: Cost per point of strike power.

Cost per charge: Cost per point of shield power.

Cost per phase: Cost per phase of warding.

#	Name	Strike type	Power	Range	Time	Base cost	Range cost	Power cost
